

Scenario: You are a part of a team working for a company and notice abusive behaviors coming towards you by some of your co-workers. You would like to file a report but need some evidence such as voice recordings and pictures.

Task 1: Head to the Documentation of Abuse and Crime app and hit the record button to record a 25 second snippet.

Task 2: Save the audio recordings to a secure folder provided in the app

Task 3: Share the audio recording by hitting the share button and use the email option to email the recording to your boss.

NOTES:

Change:

I would change the fact that my app needs an option to take pictures.

I also need to make it so that it automatically records whenever it detects loud noises.

I need to provide an auto save feature .

Keep:

I can keep the 25 second snippet since the user stated that it was a perfect amount of time to record evidence.

The sharing feature is also helpful so I will keep that.

The low profile of the app because it doesn't make any noise when it begins to record.
